

dbAnyCursor::selectByKey

dbAnyCursor::selectByKey
Range

dbTableDescriptor::find

```
graph LR; A[dbAnyCursor::selectByKey] --> C[dbTableDescriptor::find]; B[dbAnyCursor::selectByKey Range] --> C;
```

The diagram illustrates a mapping from two database cursor methods to a single table descriptor method. On the left, there are two white rectangular boxes. The top box contains the text 'dbAnyCursor::selectByKey'. The bottom box contains the text 'dbAnyCursor::selectByKey' followed by 'Range' on a new line. On the right, there is a gray rectangular box containing the text 'dbTableDescriptor::find'. Two blue arrows originate from the right side of the two white boxes and point towards the left side of the gray box, indicating that both cursor methods utilize the 'find' method of the table descriptor.
